EDUCATION

Vellore Institute of Technology, Bhopal

2024 – 2028

B.Tech Computer Science Engineering — Specialization in AI/ML | CGPA: 8.1

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL, JavaScript, TypeScript, HTML/CSS

Frameworks & Technologies: React, Next.js, Node.js, Express.js, Flask, Streamlit, Docker, REST APIs

Databases: PostgreSQL, Supabase, MySQL, pgvector (Vector DB)

Libraries: Pandas, NumPy, Matplotlib, Scikit-learn, XGBoost, SHAP, Plotly

AI/ML: RAG Systems, Vector Embeddings, EDA, ML Model Building, Feature Engineering, Model Evaluation, OpenAI API, Google Gemini API, Prompt Engineering

Developer Tools: Git, GitHub Actions, Linux, VS Code, Postman, Vercel, Prisma ORM, Excel

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Theory of Computation, Compiler Design

EXPERIENCE

Machine Learning Engineering Intern | FlyRank AI

Jul 2026 – Aug 2026

- Incoming ML Engineering Intern contributing to AI/ML model development, data pipelines, and production machine learning features at FlyRank Corp.

Web Developer Intern | Webyou Technologies

May 2026 – Jul 2026

- Built and maintained responsive websites and web applications using HTML, CSS, and JavaScript for client-facing projects.
- Supported senior developers in implementing frontend and basic backend features, demonstrating consistent initiative across deliverables.

Artificial Intelligence Intern | Navodita Infotech

May 2025 – Jun 2025

- Worked on AI-driven tasks involving data handling, model exploration, and applied machine learning using Python-based frameworks.
- Collaborated with the team to document findings and contribute to project deliverables.

Writer & Content Creator | Kraaft Entertainment

Jan 2025 – Present

- Produced technical and non-technical content for digital platforms, transforming complex topics into reader-friendly material for online campaigns.

PROJECTS

RAGForge | Next.js, TypeScript, Supabase, pgvector, Google Gemini API, Vercel

- Built a multi-tenant RAG SaaS platform enabling businesses to deploy branded AI chatbots grounded in their own documents, embeddable on any website via a single <script> tag.
- Engineered a full RAG pipeline — PDF/DOCX/TXT parsing, ~500-word chunking with overlap, Gemini text-embedding-004 (768-dim vectors), pgvector cosine similarity retrieval, and Gemini LLM answer generation with source citations.
- Implemented strict multi-tenant data isolation with an admin super-dashboard and a client self-serve portal supporting document uploads, web page crawling, branding configuration, lead capture, and analytics.
- Delivered enterprise-grade features including multi-language auto-detection (Hindi, Tamil, English), typo-tolerant search, dark/light mode chat widget, and client onboarding via settings cloning.

RCA Copilot | Next.js, Express.js, Node.js, PostgreSQL, OpenAI API, Prisma ORM, Vercel

- Built an AI-powered incident investigation platform generating structured Root Cause Analysis reports in under 30 seconds from raw logs and incident descriptions.
- Engineered a 4-stage processing pipeline — log parsing, anomaly detection, timeline reconstruction, and AI root cause identification — with confidence scoring and evidence-based reasoning.
- Designed blast radius analysis to estimate affected users, impact duration, and impacted services across P0–P3 severity levels, with auto-generated prioritized remediation action items.

- Delivered full-stack architecture with Next.js frontend, Express.js/Node.js backend, PostgreSQL via Prisma ORM, deployed on Vercel with markdown export and historical incident tracking.

CI/CD AI Pipeline | GitHub Actions, Express.js, Google Gemini API, Docker, PostgreSQL, Next.js

- Built an AI-powered CI/CD system that captures GitHub webhook failure events, ingests pipeline errors via an Express.js service, and auto-generates code fixes using the Google Gemini API.
- Integrated a Docker sandbox to test AI-generated fixes in isolation before automatically opening a validated Pull Request to the repository, closing the debugging loop without human intervention.
- Stored all pipeline failure events and fix history in PostgreSQL, surfaced on a real-time Next.js dashboard for monitoring failure patterns, fix success rates, and overall pipeline health.

StackSensei | React, TypeScript, Node.js, Express.js, Supabase, Google Gemini API, Vercel

- Developed an AI codebase analysis platform with 3 input modes — natural language prompt, project file upload, and direct GitHub repository URL with automatic README parsing.
- Delivered analysis in 3 tailored output modes (non-coder, coder, beginner) using Gemini API to auto-detect frameworks, languages, APIs, databases, auth systems, and build tools.
- Built an interactive AI chat layer for follow-up questions on any part of the codebase, with Supabase auth and PostgreSQL-backed session management across full-stack TypeScript.

AirPredict NYC | Python, Scikit-learn, XGBoost, SHAP, Streamlit, Pandas, Plotly

- Built a production-ready ML application predicting NYC Airbnb listing prices using an ensemble of 3 models — Linear Regression, Random Forest, and XGBoost — trained on 10+ listing features.
- Implemented SHAP explainability with interactive Plotly waterfall charts for per-prediction feature attribution, quantifying each feature's exact contribution to the predicted price.
- Designed a KNN-based similar listing recommender surfacing the top 5 most comparable NYC listings with geographical distribution plotted on an interactive map.
- Architected a modular codebase separating training pipeline from inference engine with graceful dependency fallback for stable cloud deployment.

CODING PROFILES

- [LeetCode](#) — Consistently solving DSA problems across Arrays, Strings, Hashing, Sorting, and Recursion.
- GitHub (github.com/anshere0) — Actively building and shipping full-stack AI/ML products and developer tools.

CERTIFICATIONS

- ServiceNow Virtual Internship Program (CSA Exam Prep, Agentic AI, ATF, Flows) — ServiceNow University / AICTE / SmartBridge (Jun 2026)
- Programming in Java — VITyarthi / VIT Bhopal University (Jul 2026)
- Programming with Generative AI — NPTEL
- Python Essentials 1 & 2 — Cisco Networking Academy
- HTML, CSS, and JavaScript for Web Developers — Johns Hopkins University, Coursera
